

Pressure Injury Advisory Board Meeting

FIRST MEETING

7TH APRIL 2024

CAHOCON, KOLKATTA

8th Edition

CAHOCON 2024

6TH & 7TH APRIL 2024

Purpose & Objectives

PURPOSE

The Pressure Injury Advisory Board Meeting is a first-time initiative to consolidate expert opinions and resources in pressure injury prevention and translate related clinical evidence into practices and implementation.

OBJECTIVES

- To obtain insights and recommendations from the panel to develop a consensus document to support healthcare practitioners in the prevention of Pressure Injury
- How to effectively deploy the recommendations in a structured and standardised manner that may improve clinical and economic outcomes in Pressure Injury prevention in the local clinical settings.

TODAY'S AGENDA

Sr.	Time	Topic	Speaker
1.	8:00 – 8:10 am	Welcome and Introduction of Panellists	Dr. Sandhya Bhoyar
2.	8:10 – 8:20 am	India's first Advisory Board on PI – context setting	Dr. Vijay Aggarwal
3.	8:20 – 8:30 am	Economic Burden of PI in India	Dr. Sanjeev K Singh
4.	8:30 – 8:40 am	Consensus guidelines – Need of the hour	Dr. Deepak Govil

Panel Discussion	8:40 – 10:30 am	Existing current practices in PIP – Gaps and Challenges
		Need of Standardization of clinical practices (Why & How) PUP Care Bundle
		Specific types of pressure injuries and its prevention
		Various Risk assessment tool for PI-- (ICU & OT) –a consensus on the recommendation
		Device Associated Pressure Injuries (DAPI) – rising concern
		Recommendations for ideal prophylactic dressings in PIP
		Break for High tea
		Importance of understanding Push Tool & its application
		Documentation & Reporting – importance and relevance
		Structured wound care education & training in pressure injury management
		Strategies to bring pressure injury as an important safety concern in hospitals
		Multidisciplinary approach in PIP – process driven ecosystem
		Conclusion & vote of thanks

GAPS & CHALLENGES

Discussion points:

- What are the gaps & challenges in the existing current practices in prevention of Pressure Injury?
- What are the key challenges and barriers healthcare professionals face in implementing pressure ulcer prevention protocols?

Objectives:

Collaborative problem-solving and sharing of insights and solutions

Definitions and Classification

Discussion points:

- What are the key principles of skin integrity maintenance and prevention of skin breakdown? Are pressure injuries and pressure ulcers the same?
- What are the specific types of Pressure Injuries and how important is the prevention?

Objectives:

Laying out a clear definition and classification of Pressure Injury

Standardization of Clinical Practices & Best Practices

Discussion points:

- Do you feel there is a need of Standardization of Clinical Practice for prevention of Pressure Injury? What steps can be taken ?
- The need for a standard risk assessment tool for OT for prevention of Pressure Injury
- Can you share any strategies incorporated into the implementation of the PUP Care Bundle in your hospital?

Objectives:

To develop consensus on the Standardization of Clinical Practices in Pressure Injury

8th Edition

CAHOCON 2024

6TH & 7TH APRIL 2024

Various Risk assessment tool for Pressure Injury

Discussion points:

- What are the various risk assessment tools for pressure injury prediction, how frequently these tools are used in clinical practice ?
- Which are the risk assessment tools for ICU and OT for prevention of Pressure Injury? How we use PUSH tool in the hospital setting?
- How can Device Associated Pressure Injuries (DAPI) be prevented

Objectives:

To develop consensus on the risk assessment tools for ICU and DAPI

Various Risk assessment tool for Pressure Injury

Discussion points:

- Which are the risk assessment tools for OT for prevention of Pressure Injury? How we use PUSH tool in the hospital setting?

Objectives:

To develop consensus on the risk assessment tools for OT

Role of QIPs & Protocols

Discussion points:

- What is role of QIPs and evidence generation in pressure ulcer prevention?
- How can we create more clinical evidence in India?

Objectives:

Discuss and outline potential collaboration projects for prevention of pressure injury

Recommendations for ideal prophylactic dressings

Discussion points:

- What are the recommendations for ideal prophylactics dressing in Pressure Injury Prevention?
- What are the characteristics and what role they play in the prevention of pressure injury?

Objectives:

To develop consensus on the recommendations for ideal prophylactic dressings in Pressure Injury

Documentation and Reporting

Discussion points:

- What are the essential components that should be included in the documentation and reporting of pressure injuries?
- Importance of documentation and how to improve Pressure Injury Incidence reporting?

Objectives:

Facilitated discussion on best practices in documentation and reporting prevention of Pressure Injury and best practice sharing

Strategies to bring pressure injury as an important safety concern in hospitals

Discussion points:

- How can hospitals foster a culture of accountability and continuous improvement in pressure injury prevention effort? How do we influence the policy makers?

Objectives:

Collaborative problem-solving and sharing of insights and solutions

Education & Training in pressure injury

Discussion points:

- How can hospitals foster a culture of accountability and continuous improvement in pressure injury prevention efforts and what would be the role of structured wound care education & training in pressure injury management?

Objectives:

Facilitated discussion on best practices in education and training of Pressure Injury and recommendations

Multidisciplinary approach in PIP

Discussion points:

- How does a multidisciplinary approach benefit pressure injury prevention
- Use of AI based tools in early prediction of PI

Objectives:

Collaborative problem-solving and sharing of insights and solutions

Thank you
